SUPPLEMENT TO

ROEDING'S PRACTICAL HORTICULTURE

MARCH 1st, 1914

The Glorious Rainfall and Favorable Conditions Guarantees a Long Planting Season. A Splendid Assortment to Select From at Special Low Prices. Write Us Your Wants.

APPLES.

This is a season after one's own heart, and for the planting of trees it could not be more favorable. We are now commeucing to receive inquiries from our numerous friends in the higher mountain regions and from the coast counties for apple trees. The remunerative prices at which good apples are selling has stimulated planting and the indications are, now that growers are standardizing their packs, the natural teudency toward higher prices will surely rule—there is al-ways a good market for fine fruit, consequently we grew a big stock of such varieties as King David and Delicious, fruit that is fit to grace the table of royalty. Many sections are appreciating the great value of these late introductions and they will prove to be great unoney makers. It is not necessary for us to dwell on the commercial value of such varieties of apprecial value of such varieties of appreciations are such value of the varieties of appreciation value of the varieties of appreciation value of the value of mercial value of such varieties of apples as Jonathan, Smith's Cider, Esopus Spitzenburg, Stayman's Winesap, White Winter Pearmain, Yellow Beliflower, Yellow Newton Pippin. Let us figure ou your requirements. If you contemplate planting 500 or more trees, and are short of ready cash, we may be able to interest you in a new plan of ours, that is well worthy of consideration. There is still a month and a half to plant. Our stock is the wouder of everybody that sees it. They can not believe that our magnificent budded six to eight foot trees on whole roots are yearlings. They are just the same.

PEARS

The great prices which green pears brought in the Eastern markets in 1913 have stimulated the planting of 1913 have stimulated the planting of pears of all the leading shipping sorts. Just bear in mind that pears are adapted to canning and drying as well as shipping. The demand for dried pears far exceeds the supply and this has been the case for a number of years. We do not advise planting pears on light soils unless it should be in the river bottom lands. The best soil for the pear is a good red or black soil for the pear is a good red or black loam. Our supply of the large sizes is exhausted, but we still have a fine is exhausted, but we sain according to of Bartlett, Doyenne du Comice and P. Barry in medium grades. They are fine stocky trees. We are preare fine stocky trees. We are pre-pared to offer you inducements on this

pared to offer you inducements on this stock in the way of prices.

Did it ever occur to you that you can grow pears in a small garden if they are budded on quince roots? It's a fact. Trees not over six feet high are veritable pictures when loaded with a crop of luscious pears. Try a few trees. They are ornamental, profitable and will surely give you a lot of pleasure. We can furnish Beurre Clairgeau, Beurre Hardy, Doyenne du Comice, Easter Beurre, Glou. Morceau, Howell P. Barry and Winter Nelis.

PLUMS

There has been a great demand in the last few years for plums. Today the plum is regarded as one of our most profitable shipping fruits. If you have a reasonably good heavy soil you certainly should be interested in such varieties for shipping as Clyman Diagonal Clyman C varieties for shipping as Clyman, Diamond, Giant and Wickson for shipping to the Eastern markets. They are all great winners. As to the canning sorts, you can make no mistake in plarting Bavays Green Gage, Jefferson, Washington and Yellow Egg.

PRUNES

It just happens in a year of unusual demand like this has been for prunes, that several of our customers who had placed large orders have been unable to plant on account of their ground being too wet, preventing them from standar preparing the ground for the trees merits.

tage. we want our customers way have been disappointed in may have been disappointed in securing heir trees to write us for special prices. These trees are perfectly dormant and are in fine shape for plauting out. The prune is no longer a joke. The European markets take the greater part of our product and the demand is growing stronger in the demand is growing stronger in the Uuited States every year. Write us for special prices on trees budded on almond, myrobolan and peach roots. In following varieties: French, German, Hungarian, Sugar Silver, Robe de Sargent.

APRICOTS

During the last five years we have never had enough apricots. We anti-cipated a big demand this year and had the largest stock of trees on aprihad the largest stock of trees on apricot, peach and myrobolan roots we have ever grown. Sales have been heavy, but we can still furnish Blenheim, Hemskirke, Royal, Tilton on apricot, peach and myrobolan roots. Don't forget that for your wet, heavy laud there is nothing like the Myrobolan root. The Hemskirke bears a very close resemblance to the Moorpark, and is almost as large. It is a heavy and regular cropper, and one heavy and regular cropper, and one of the best. On several different occasions we have observed where packers have brought the Hemskirke for the Blenheim because the fruit was of larger and uniform size, paying a half a cent more for the dried product. They would insist that they were Blen-

The so-called Alameda Hemskirke which is recognized as one of the leaders in the Santa Clara valley is the genuine Hemskirke, nothing else. Our original buds came from these trees so we know what we are talking about. For the San Joaquin valley the Tilton is one of the very best. Rarely gets touched by frost because it blooms two weeks later than any other variety. The fruit runs into large sizes, and even when dead ripe is very firm. Nothing will compare to it for shipping, canning and drying purposes. We have made a study of this variety for a number of years and consider it the very best for the interior valley lands.

PEACHES

If we did not have a fine stock of peaches coming in for 1915, we would be tempted to replant many of our peach trees. We can't afford to do this, First of all we are short of land and secondly we are convinced that and secondly we are convinced that our friends know a bargain when they see it and they are not going to pass up this chance of buying Elbertas, Fosters, Lovell, Muir and Wheatland peaches at lower figures than ever be-

ALMONDS

This has been one of those years when the growers have simply coined money on their almond orchards. Ac-cording to our views prices have been too high, excessive prices heavy importation and this is what we want to avoid. We grow an im-mense stock of almonds and have a mense stock of almonds and have a fair supply of trees on almond and peach roots. Some of the trees on almond are small, but they are stocky. Our trees on peach roots in some instances, as you will observe on referring to our surplus list, run into the larger sizes. Most people want trees on almond roots. For exceptionally on almond roots. For exceptionally gravelly, dry soils this root "is it," but for average loamy or heavy land the peach roots is better than the almond.

All the varieties we are offering are

they had ordered, so they have re- and if you want any particular infor- commercial business is that practically

GRAPES

It is no exaggeration to say that the table grape and wine business are in better shape today than they have been for years. The wine business reached its lowest ebb two years ago. The many problems which were evidently responsible for the disastrous low prices have been solved, and the marked advance, and at the same time very satisfactory prices which the growers have received for their wine grapes in 1913 will continue and more

than likely increase.

The late table grape has a greater future than ever before. Through the painstaking efforts and large number of experiments carried on in California by agents of the United States Department of Agriculture, Washington, D. C., exteuding over a period of several years, the method of preserving grapes in perfect condition several months after they have been picked, has been fully demonstrated. In con-sequence of this there is a greater future than ever before in the San Joaquin and Sacramento valleys for such varieties of grapes as the Emperor, Black Cornichon and Almeria. The importation of grapes packed in cork dust from Europe is one million kegs a year of 40 pounds each. The possibilities of our grapes packed in red wood saw dust are, therefore, unlimited, and a large acreage should be devoted to the planting of these late ripening grapes.

Raisin grapes are also coming into their own and this business is on a better footing than ever before. Raisin bread has popularized the Thompson's Seedless grapes, and it is no wonder that there has been such a heavy demand for the vines of this variety.

THE SEASON

We are receiving letters from plantwe are receiving letters from planters daily now in which they express hesitation about placing their orders for nursery stock, fearing that the season has advanced too much to make it safe to transplant trees. For their benefit we desire to state that we will be planting our own seedlings and cuttings up to the middle of April, and that we do not anticipate any difficulty in getting our usual good stand. In some instances deciduous trees may be started slightly, but if our instruc-tions relative to cutting the trees back, irrigating them, and protecting the bodies of the tree from being exposed to the sun, are followed there is no reason in the world why just as good a stand should not be secured now as the trees had been planted in the early part of the season. When you receive your shipment of trees, do not fail to read carefully the instructions printed in red ink that we mail with every invoice in reference to caring and planting of trees received from us.

EVERGREENS

This is the season of the year for planting evergreens of every description, and from now on we expect to be busily engaged in taking care of the orders received early in the season for this class of stock. We have a magnificent stock of all varieties of evergreen trees, shrubs, palms, etc. If we can be of any assistance to you in making your selection of desirable ornamentals for your grounds, do not hesitate to write to us, for we will be pleased to give you all the information desired.

A WORD TO OUR CUSTOMERS

quested us to use our selling facilities to place these trees to the best advaued to accord you a prompt reply.

our selling is confined to a few months and during that time every man have and during that time every man naving any position of responsibility is worked up to the limit. Sometimes people are at a loss to understand why their letters are not answered more promptly, or why their shipments are not made sooner than they

> It is not necessary to a detail as to these matters, we wish to say to our customers that this business has developed to the point it has through the confidence we inspired in those who have favored us with their business.

We want to take this opportunity of saying to our customers that it is our desire at all times to accord them every courtesy, and at any time they have reason to feel that we have been delinquent in giving them proper attention, no matter how small their order may be, we want to assure them that we would esteem it a personal favor if they will give us an opportunity to investigate their particular complaint before condemning us. In the 31 years that we have been engaged in this business we have never during that entire time had a lawsuit, although we have sold millions of trees, and this in itself is, we think, a record which we have every reason to be proud of.

A FEW NOTES FROM PLEASED CUSTOMERS

"Your catalogue received. prices compare favorably with others and your stock always gave entire satisfaction."—Carl D. Fredericks, Chicago Park, Calif.

"You may be interested to know that the plums we ordered from you three years ago, the Formosa, etc., are thriving beautifully, as are the grapes also."—Mrs. Fred Cowen, 115 Broad Ave., San Antonia, Texas.

"I received the trees the 30th of Jan., in good condition and number and kind all as per order. They look to me very fine."—Caroline B. Taylor, Glenn, Calif.

"The trees from you last year were much superior to those bought else-where, so am giving you my complete order this time, and presume in the future, as I shall be planting for several seasons to come."—Robert Liddell, Lake Port, Calif.

"I planted some of your trees in 1907 and 1908 and they are the best I ever planted."—J. G. Nyquist, San Jose, Calif.

"I received the bale of plants in fine order, Saturday, Feb. 14th. I must say you sent me the best plants of any nursery. I am sorry that I got plants elsewhere. If I could have bought all my plants of you. I thank you for sending me such good plants." —Zenas Smith, No. 51 Pope St., San Francisco, Calif.

"Trees arrived in the best shape. Mr. Weatherby, County Horticultural Commissioner, was free to say that they were by far the best and cleanest stock to pass his hands this year."

—J. Bagley, Eureka, Calif.

"Enclosed find check for \$49.32 in full for invoice of Jan. 12th. You sent me very fine trees and I will try to get some of my friends to send you an order."—H. H. Harris, Elsinore, Calif.

"The fruit trees I have in my or-chard, which I have purchased from peach roots is better than the almond.
All the varieties we are offering are standards. No use enumerating their merits. They are in prime condition

No business is without its troubles. The nursery business is no exception to the rule. The marked difference between our business and the average Block, Los Angeles, Calif.
